FREE CHECKLIST · QUEENSLAND

Is your home ready for 1 January 2027?

Every home in Queensland must have interconnected photoelectric smoke alarms by 1 January 2027. Use this checklist to see where your home stands. Tick each box as you go.

1 Check each alarm

- [ ] It's marked **AS 3786-2014** on the alarm body
- [ ] It's **photoelectric** and does **not** contain an ionisation sensor
- [ ] It's **less than 10 years old** (check the date on the alarm)
- [ ] It's **hardwired** to mains power, or has a **non-removable 10-year battery**

2 Check they're interconnected

- [ ] Press the test button on one alarm: **every alarm in the home sounds**

3 Check every location is covered

- [ ] An alarm **in every bedroom**
- [ ] An alarm **in every hallway or room connecting bedrooms**
- [ ] An alarm **on every storey** of the home

4 Know the rules for replacing them

Hardwired now?
Replacements must also be hardwired, and hardwired alarms must be installed by a qualified electrician.

Get it certified
You'll want a smoke alarm compliance certificate as proof your home meets the rules. A licensed install comes with one.

5 Keep them working

- [ ] Test every month · vacuum away dust and insects · never cover or paint over them

Missed a box? We'll make it compliant.
Licensed electricians · Logan and Brisbane's southside · Licence 92262

Source: Queensland Fire Department, "Smoke alarm laws are changing in Queensland" (fact sheet QFE00206, May 2026) and qld.gov.au. Checked 7 November 2026. General information, not legal advice. Homes sold or leased since 1 January 2022, and new builds and substantial renovations since 2017, already have to comply.
